

NOTICE

Subject: Dangerous Goods movements travelling to or from Tasmania

Date: February 28, 2018

Distribution: All SeaRoad Shipping Customers

The transport of dangerous good (DG) and hazardous substances is heavily regulated in Australia and any movements require access to dangerous goods forms and documentation at all times.

Victorian Ports Corporation Melbourne, in consultation with the shipping and export industry, has developed the Dangerous Goods Hub (DG Hub - www.dghub.com.au) to assist users in reporting their DG information throughout the supply chain.

The key advantages of the DG Hub are:

- It is a more efficient, consistent and faster method for users to supply their DG data;
- It can assist in streamlining the way users report DG information through the port community;
- Exporters, packers, transport companies, freight forwarders and shipping lines can create and distribute Multimodal Dangerous Goods Forms and vessel DG manifests using the system;
- There is no need to store paper DG forms as DG Hub provides an electronic repository of all your own forms.

The DG Hub is easy to use for anyone familiar with Multimodal Dangerous Goods Forms (MO41s) and email systems.

SeaRoad Shipping therefore informs customers they are required to provide the necessary data in electronic form. This replaces the previous practice of submitting information in hard-copy form using the Multimodal Dangerous Goods Form (AMSA250 form, still referred to as MO41 forms).

Thank you for your assistance in this matter.
